DETAILED ACTION

(1)

Allowable Subject Matter

Claims 1-28 have been found to be allowable over the prior art of record.

(2)

The following is an examiner's statement of reasons for allowance:

Methods for the formation of Piezoelectric film type actuators, such as taught by U.S. Patent Nos. 6,347,862 to Kanno et al. and 6,013,970 to Nishiwaki et al., are known in the art. Kanno et al., for example, disclose one such method comprising the steps of: Providing an intermediate transfer member; forming a piezoelectric film assembly on the intermediate member; forming a vibration (oscillating) plate on the piezoelectric film assembly; providing a liquid discharge assembly having compression chambers and ink chambers formed therein; bonding the piezoelectric film assembly and vibration plate carried on the intermediate transfer member to the liquid discharge assembly; and peeling off the intermediate transfer member from the piezoelectric film assembly. Although Ichikawa et al. disclose similar methodologies for the formation of semiconductor devices, including the use of a porous peeling layer disposed between the temporary substrate and the semiconductor device layer formed thereon, none of the prior art of record specifically teach or suggest the method set forth in applicant claims 1 and 15 wherein the porous peeling layer and piezoelectric layers are formed on the temporary substrate as precursors which are fired to form the functional layers prior to transfer to a second substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

(3)

Response to Amendments and Arguments

The substitute specification filed December 15, 2003 is approved and has been entered. The amendments and arguments filed December 8, 2003, is acknowledged. In response to the thereto, claims 1-28 have been passed to issue as set forth and explained in sections (1) and (2), above. This action is in specific response to amendments to applicant claims 1, 12, 15 and 26

Art Unit: 1734

wherein the invention has been further defined to require the formation of the porous and piezoelectric layers by the coating of precursors on the temporary substrate followed by firing and transfer bonding of the piezoelectric layer to the second substrate.
